# Report: Development of Toman Bike Share Dashboard

---

## Overview of Toman Bike

**Company Name:** Toman Bike

**Industry:** Urban Mobility and Transportation

**Business Model:** Toman Bike Share operates a bike-sharing service that allows users to rent bicycles for short-term use. The company aims to provide a convenient, eco-friendly, and cost-effective transportation option for urban residents and visitors.

## Problem Statement

Request for Development of Toman Bike Share Dashboard

### Objective:

Develop a comprehensive and interactive dashboard for Toman Bike Share to facilitate data-driven decision-making by displaying key performance metrics.

### Requirements:

1. Hourly Revenue Analysis: Visualize revenue generated on an hourly basis.
2. Profit and Revenue Trends: Track and display trends in profit and revenue over time.
3. Seasonal Revenue: Analyse and present revenue patterns across different seasons.
4. Rider Demographics: Provide insights into the demographics of riders, including rider type and other relevant attributes.

### Design and Aesthetics:

- The dashboard should use company colours and be designed for ease of navigation and user-friendliness.

### Data Source:

- Access to the necessary databases will be provided. If no database is available, one must be created.

## Introduction

This report outlines the plan for developing a dashboard for Toman Bike Share. The objective is to create a tool that provides a comprehensive view of key performance metrics, aiding in informed decision-making. The dashboard will include analysis on hourly revenue, profit and revenue trends, seasonal revenue, and rider demographics. It will also be designed with user experience in mind, incorporating company colours and ensuring ease of navigation.

## Workflow Overview

The workflow for developing the Toman Bike Share dashboard consists of the following steps:

1. Create a Database
2. Develop SQL Queries
3. Connect Power BI to Database (DB)
4. Build a Dashboard in Power BI
5. Answer the Analysis Question

## Detailed Workflow

### 1. Create a Database

**Objective:** Set up a structured database to store and manage the data needed for analysis.

- **Tasks:**
  - Design database schema including tables for transactions, rider demographics, and revenue metrics.
  - Create tables with necessary fields (e.g., transaction timestamp, revenue amount, rider age, and gender).
  - Populate tables with existing data or integrate with existing data sources.

### 2. Develop SQL Queries

**Objective:** Write SQL queries to extract and aggregate the data required for analysis.

- **Tasks:**
  - Create queries to calculate hourly revenue.
  - Develop queries to analyze profit and revenue trends over time.
  - Write queries to assess seasonal revenue patterns.
  - Generate queries for rider demographics analysis.

### 3. Connect Power BI to Database (DB)

**Objective:** Establish a connection between Power BI and the database to enable data visualization.

- **Tasks:**
  - Set up Power BI data source connections.
  - Configure data import settings.
  - Validate data connections and ensure data integrity.

### 4. Build a Dashboard in Power BI

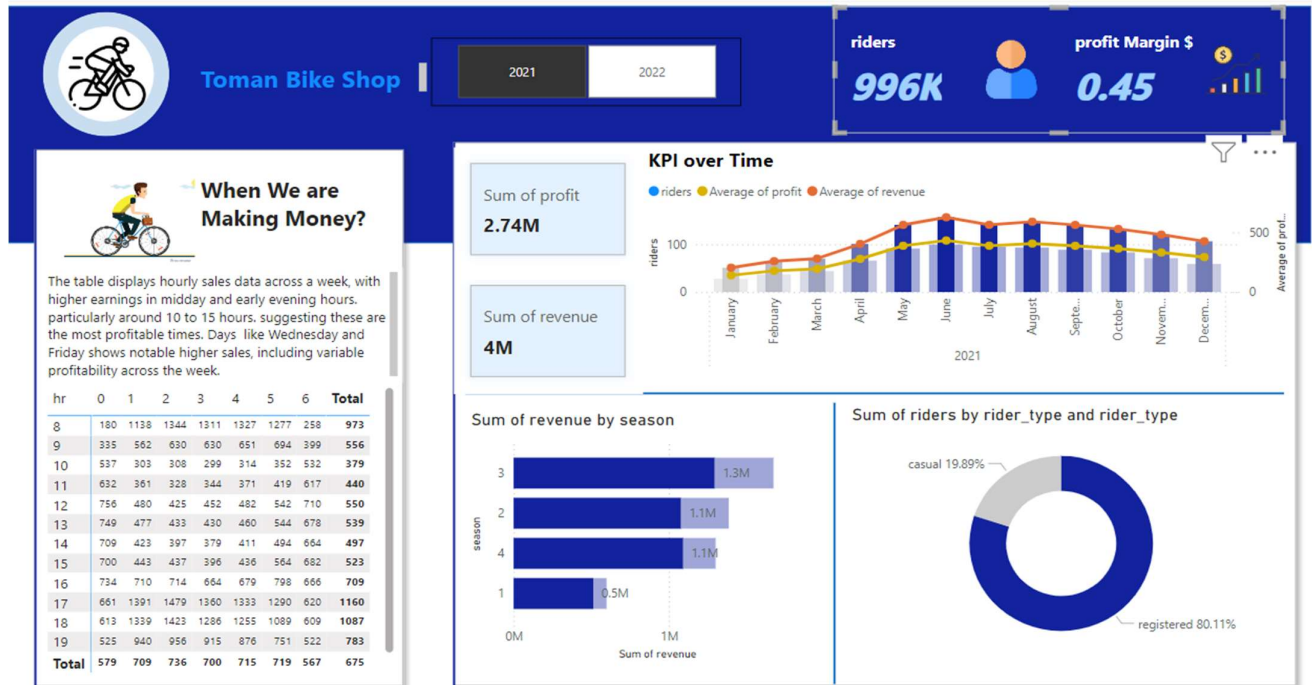

**Objective:** Design and develop an interactive and visually appealing dashboard in Power BI.

- **Tasks:**
  - Create visualizations for hourly revenue analysis (e.g., line charts, heatmaps).
  - Develop time-series charts for profit and revenue trends.
  - Design seasonal revenue analysis graphs.
  - Build visualizations for rider demographics (e.g., pie charts, bar graphs).
  - Apply company colours and ensure ease of navigation.

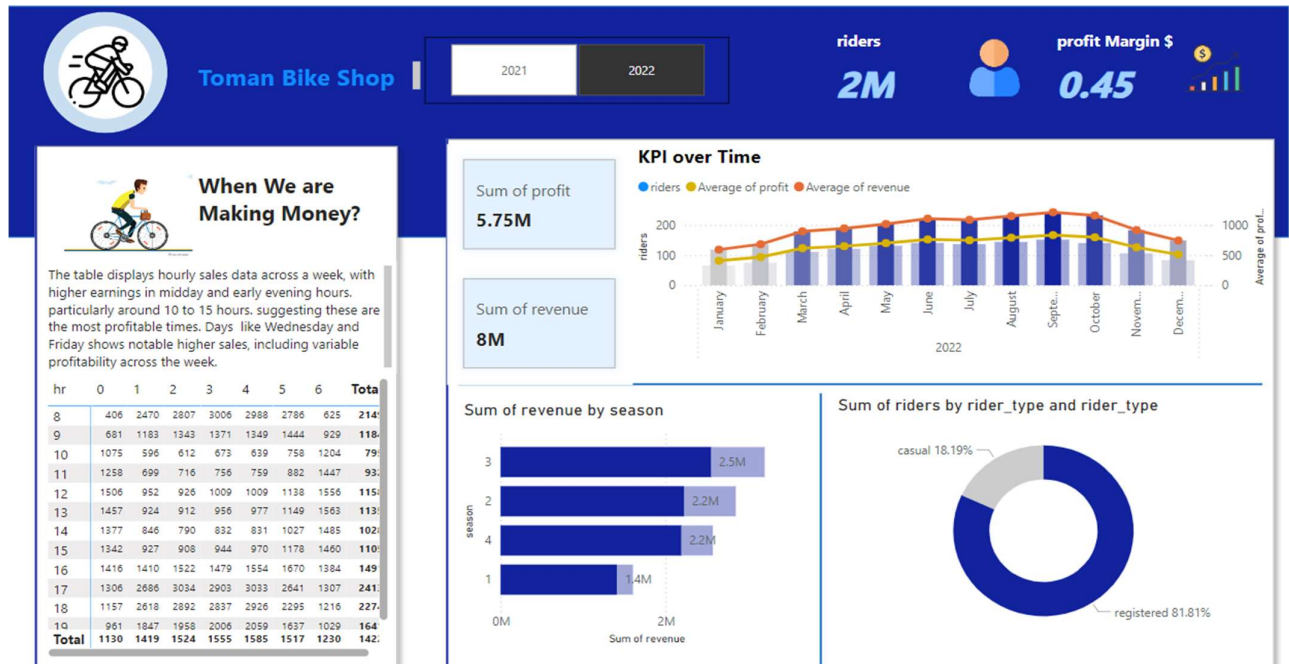

## Over All Revenue Analysis Dashboard (2021-2022)

## Revenue Analysis Dashboard (2021)

## Revenue Analysis Dashboard (2022)

## 5. Answer the Analysis Question

**Objective:** Use the dashboard to answer the analysis question and provide recommendations.

- **Tasks:**
  - Analyze the impact of a 25% price increase on revenue and demand.
  - Review trends and insights from the dashboard.
  - Provide a recommendation based on the analysis.

## Analysis and Recommendations

**Based on the data analysis:**

- **25% Price Increase:** A 25% increase in price has been considered. To fully assess the impact, the following factors should be analysed:
  - **Revenue Impact:** Compare projected revenue with current levels to determine potential gains.
  - **Demand Impact:** Consider the projected 64% increase in demand, which might mitigate revenue loss due to higher prices.
- **Recommendation:**
  - If the 64% increase in demand is accurate and the additional revenue from the price increase outweighs any potential loss in demand, the price increase could be beneficial.
  - However, conduct a sensitivity analysis to ensure that the demand increase is sustainable and accurately projected.

## Conclusion

The development of the Toman Bike Share dashboard will offer a clear and insightful view of key performance metrics, including hourly revenue, profit and revenue trends, seasonal revenue, and rider demographics. The dashboard will be designed to facilitate easy navigation and data interpretation, helping in strategic decision-making.
